

ReactJS Concepts - Quick Notes

1. React kya hai?

React ek JavaScript library hai jo UI (User Interface) banane ke liye use hoti hai.

2. Components

Component React ka basic building block hota hai. Har UI piece ek component hota hai.

3. JSX

JSX JavaScript ke andar HTML likhne ka syntax hai.

4. Props

Props ka use data ko ek component se doosre me bhejne ke liye hota hai.

5. State

State component ka internal data hota hai jo change ho sakta hai.

6. useState Hook

useState functional component me state manage karne ke liye hota hai.

7. useEffect Hook

useEffect side effects jaise API calls handle karta hai.

8. Conditional Rendering

Conditions ke basis pe UI dikhana ya chhupana.

9. Lists & Keys

Array data ko list me render karne ke liye map() use hota hai.

10. Controlled Components

Form inputs jinko state control karti hai.

11. Routing

React Router ka use karke multi-page feel di jaati hai.

12. Lifting State Up

State ko parent component me shift karna taaki multiple children use kar saken.

13. Context API

Global state manage karne ke liye use hota hai.

14. Redux (Basic)

Large apps ke liye advanced global state management.

15. Deployment

React app ko build karke Netlify, Vercel, ya Firebase pe deploy kiya jaata hai.
